Sweet potato starch is a type of natural starch from sweet potatoes. It is made from fresh sweet potato or dried sweet potato chips. However, fresh processing starch is the main type products because the quality of fresh sweet potato starch is better than dried sweet potato starch and it is demanding to get the dried sweet potato chips.

The sweet potato starch industry concentration is not high; there are many small factory produce potato starch.

The raw material is sweet potato. It is a type of seasonal product. Small producers usually produce the starch focus on 2-3 months after the harvest. Big producers can make the starch almost the whole year, but their whole opening capacity is around 2/3. Companies in China and India, in contrast, put more effort on direct selling business. They can act as exports at the same time, and it is a common phenomenon in this industry

There are many producers in the market. That makes the competition very fierce, and makes the price of different brands more and more closer. The dried ones are much higher than the fresh products. Sweet potato starch price is influenced by the raw material price very well.

The global Sweet Potato Starch market is valued at 560 million US\$ in 2017 and will reach 750 million US\$ by the end of 2025, growing at a CAGR of 3.7% during 2018-2025.
