Abstracts

Synthetic paper, from its early development and historical evolution, has typically been manufactured using synthetic resin derived from petroleum as its primary material. Naturally, this has given it characteristics similar to those of plastic film, but its appearance is remarkably similar to that of regular paper made from wood pulp. In addition, many synthetic papers have properties similar to those of regular paper. Major synthetic paper products include BOPP (Biaxially Oriented Polypropylene) and HDPE (High Density Polyethylene). BOPP synthetic paper market share worth 145.7 million USD in 2015, is expected to record a CAGR of 6.6% over 2016-2021. The growth can be attributed to superior BOPP features easing lamination, coating, and printing work. Furthermore, it is cost effective and possesses superior strength as well as exceptional moisture retaining characteristics.

It is also used as packaging material for fruits, snacks, confectionary, fast food, and vegetables. HDPE synthetic paper market price worth 73 million USD in 2015 is projected to grow at a rate of 5.6% over 2016-2021.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
