Abstracts

This report studies the global Tailgating Detection market status and forecast, categorizes the global Tailgating Detection market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Today's access control systems are designed to help control and manage authorized access into secure areas. Ensuring that every individual has properly presented a valid ID or successfully cleared biometric identification is a major challenge that security professionals face. The prevention of tailgating and piggybacking (in other words, cheating or outsmarting the system) is a problem existing solutions do not sufficiently address. Tailgating detection system works with security systems by intercepting the signal emitted from the ID reader and determines the status of the access point. The sensor then establishes whether or not a single individual is attempting entry, and in the event of dual or unauthorized entry, provides the necessary output by locking the door or triggering an alarm, thereby adding a security layer to the existing access control system.

At present, in the developed countries the tailgating detection industry is generally at a more advanced level, the world's large enterprises are mainly concentrated in the Europe and United States. Meanwhile, foreign companies have more mature equipment, strong R&D capability; the technical level is in a leading position. Worldwide, Europe is the largest market of tailgating detection currently. The market in developing countries is relatively small, but as the safety consciousness is increasing, the market in these regions is growing at a higher speed.

Tailgating Detection industry is high technology industry. In the manufacturing process, the important part is the manufacturing equipment and the supply of the upstream material. In the downstream, the most important factor is the downstream demand. With

the economic recovery, manufacturing industry play a role in the economic growth.

The global Tailgating Detection market is valued at 20 million US\$ in 2017 and will reach 31 million US\$ by the end of 2025, growing at a CAGR of 6.8% during 2018-2025.
