Abstracts

Teduglutide (brand names Gattex in the US and Revestive in Europe) is a 33-membered polypeptide and glucagon-like peptide-2 (GLP-2) analog that is used for the treatment of short bowel syndrome.

According to QYResearch's new survey, global Teduglutide Drugs market is projected to reach US\$ 2122.1 million in 2029, increasing from US\$ 751 million in 2022, with the CAGR of 16.0% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Teduglutide Drugs market research.

The Teduglutide market is primarily driven by the demand for innovative therapies to address short bowel syndrome (SBS) and improve the quality of life for affected patients. Teduglutide is a medication used to treat SBS, a condition characterized by impaired intestinal function due to surgical resection or congenital anomalies. The limited treatment options for SBS, coupled with advancements in gastrointestinal medicine and patient-centric care, contribute to market growth. Moreover, the demonstrated efficacy of Teduglutide in reducing dependence on parenteral nutrition and enhancing nutrient absorption further propels adoption. However, challenges include managing potential side effects and addressing patient access issues. Navigating regulatory approvals, optimizing treatment regimens, and ensuring long-term safety and efficacy are ongoing concerns. The market's success relies on continuous research in gastrointestinal disorders, collaborations between pharmaceutical manufacturers and gastroenterologists, and comprehensive patient education on the benefits and potential risks of Teduglutide treatment while addressing the evolving challenges associated with SBS management and treatment accessibility.
