Abstracts

The measuring distance of telescope later rangefinder is generally about 600-3000 meters, this kind of rangefinder to measure distance is far, but the precision is relatively low, about 1 meter. It is mainly applications in measuring long distances. Telescope laser rangefinder can be divided into monocular and binoculars laser rangefinder.

According to QYResearch's new survey, global Telescope Laser Rangefinder market is projected to reach US\$ 1794.4 million in 2029, increasing from US\$ 1036 million in 2022, with the CAGR of 8.4% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Telescope Laser Rangefinder market research.

Laser range finder (LRF) is a device that measures the distance of the target, from the observer. It is usually integrated with a camera or a gun. LRF consists of a transmitter, a receiver, a clock and a display. The transmitter emits laser beams at the push of a button, which then bounce off the required target to be collected by the receiver. There are mainly two type product of Laser Rangefinder market: Telescope Laser Rangefinder and Hand-held Laser Rangefinder. Geographically, the global Laser Rangefinder sales market has been segmented into North America, Europe, Asia-Pacific, South America and Middle East & Africa. The North America held the largest share in the global market, followed by Europe.
