Abstracts

Therapeutic proteins are engineered in the laboratory for pharmaceutical use. They include non-covalent binders, enzymes and albumin and therefore have a wide range of treatment applications. Oral vaccines are biologically prepared products, which provide active acquired immunity to diseases. There are currently oral vaccines targeting cholera, polio, rotavirus, smallpox and yellow fever, among others. Oral vaccines comprise an agent resembling the disease-causing microorganism, such as a live attenuated or killed viral particle or the micro-organisms toxins or surface proteins.

According to QYResearch's new survey, global Therapeutic Proteins and Oral Vaccines market is projected to reach US\$ 634.7 million in 2029, increasing from US\$ 426 million in 2022, with the CAGR of 5.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Therapeutic Proteins and Oral Vaccines market research.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market
