Abstracts

Thermal Imaging Equipment is a detection device that detects infrared energy (heat) by non-contact and converts it into an electrical signal, which generates thermal images and temperature values on the display and can be calculated. Due to the nature of its non-contact detection of infrared energy, many manufacturers of thermal imaging equipment were full of orders after the outbreak.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Thermal Imaging Equipment market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Thermal Imaging Equipment industry.

Based on our recent survey, we have several different scenarios about the Thermal Imaging Equipment YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ xx million in 2019. The market size of Thermal Imaging Equipment will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
