## Abstracts

TPS is a TPE based on styrene block copolymers (SBC). Thermoplastic styrenic elastomers (TPS) are the most rubber-like of TPEs, having outstanding flexibility and elasticity.

According to QYResearch's new survey, global Thermoplastic Styrene Block Copolymer (TPS) market is projected to reach US\$ 1300 million in 2029, increasing from US\$ 823 million in 2022, with the CAGR of 6.8% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Thermoplastic Styrene Block Copolymer (TPS) market research.

Thermoplastic elastomer TPE-S is a modified alloy elastomer based on SBS, SEBS and other components, with the appearance of transparent or white particles, good color matching, can be matched with black and other colors. As a new type of polymer, TPE-S has the dual performance and wide range of properties of rubber and thermoplastic plastics, and it has the advantages of good mechanical properties, environmentally friendly, easy to process, and a wide range of applications, etc. With its excellent features, TPE-S is regarded as the 'third generation rubber' after natural rubber and synthetic rubber. TPE-S is the largest thermoplastic elastomer in the world, with the rapid development of downstream automotive, fiber optic and other industries, the global market demand for TPE-S is constantly released. Globally, TPE-S related manufacturers include American Kraton, American Shell, Japanese Kuraray, Korean LG, Asahi Kasei, Sinopec, LCY CHEMICAL and other enterprises.
