Abstracts

Thimerosal (CAS 54-64-8) is a colorless crystal or milky white crystalline powder with the molecular formula $C_9H_9HgNaO_2S$. It is an effective disinfectant, which can be used for the disinfection of skin and mucous membranes, as well as the antiseptic of medicaments.

According to QYResearch's new survey, global Thimerosal market is projected to reach US\$ million in 2029, increasing from US\$ million in 2022, with the CAGR of % during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Thimerosal market research.

Thimerosal, widely used as a preservative in vaccines and pharmaceutical products, holds a strong market position with consistent growth in market size over the past years. With increasing global vaccination rates and ongoing advancements in the healthcare sector, the demand for Thimerosal is projected to sustain steady growth. However, as concerns over drug safety continue to rise, changes in regulatory policies could impact the Thimerosal market, necessitating sensitivity to scientific research and regulatory compliance for its sustained application and development in the pharmaceutical industry.
