Abstracts

Thromboelastography (TEG) is a viscoelastic hemostatic assay that measures the viscoelastic properties of blood clot formation. It is mainly used in surgery and anesthesiology. This test is capable of measuring coagulation factor function. Some of the other tests for blood coagulation includes prothrombin time and partial thromboplastin time (aPTT). However, thromboelastography provides information regarding all components of hemostasis such as coagulation and platelet function. Also, TEG offers a particular advantage in diagnosing fibrinolysis. TEG machines are used for carrying out this test.

According to QYResearch's new survey, global Thromboelastography Coagulation Analyzer market is projected to reach US\$ 380.9 million in 2029, increasing from US\$ 281.1 million in 2022, with the CAGR of 4.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Thromboelastography Coagulation Analyzer market research.
