## Abstracts

Tin's principal function is to strengthen these bronze alloys. Tin bronze is strong and hard and has very high ductility. This combination of properties gives them a high load-carrying capacity, good wear resistance, and the ability to withstand pounding.

According to QYResearch's new survey, global Tin Bronze Rod market is projected to reach US\$ 659.1 million in 2029, increasing from US\$ 542.7 million in 2022, with the CAGR of 2.8% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Tin Bronze Rod market research.

According to the data of the USGS, Chile's copper resource reserves in 2022 reached 190 million tons, accounting for 21.45% of the global copper resource reserves. This is followed by Australia and Peru, with 97 million tons and 81 million tons of copper resources in 2022, respectively. The global share was 10.95% and 9.15%, respectively. In the distribution of global copper resources, China's copper reserves are relatively small, accounting for only 3.05% of global copper reserves, ranking ninth in the world with relatively small reserves.
