Abstracts

Tobacco packaging demands premium quality with flavor barrier properties, easy printing, and handling. To prevent tobacco from deterioration, aroma transmission, and bacteria by sustaining a microclimate is choice of the right quality of packaging is paramount. Tobacco flexible packaging is available in a variety of forms to cater for various packaging needs. Some examples of these forms include, shrink sleeves, stand-up pouches, and three sided seal bags. By far and away the most significant is the flip top pack. This kind of packaging protects the cigarettes from damage and is most popular in western markets. The next most significant is soft pack, which is essentially a pack of paper construction, which offers minimal to the cigarette, but is less expensive to produce. Laminate structures of compostable films are used to produce pouches widely used by the Roll Your Own (RYO) tobacco. For primary packaging laminating materials, including bi-axially oriented polypropylene (BOPP), PE, PVDC lacquer, metalized films, polyester & nylon are employed. Flexible packaging has witnessed an increased adoption, owing to the flexibility in production, improved barrier properties, and cost effectiveness in nature.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Tobacco Packaging 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the
