## Abstracts

The coronavirus pandemic has led to an increased adoption of touchless access control devices in the market. However, post the lockdown ease, most of the commercial buildings would demand and need touchless access control systems to ensure fewer areas of contact in public spaces. Conventional access methods like handles, keypads, biometric pads, elevator buttons, among others are some of the most commonly touched spots in a building. Touchless access control devices allows people to access areas by the wave of a hand in front of the reader. The readers utilize facial recognition, read Bluetooth device numbers, or use specific mobile apps to identify the person and allow access to the facility.

According to QYResearch's new survey, global Touchless Access Control market is projected to reach US\$ 2627.9 million in 2029, increasing from US\$ 1536 million in 2022, with the CAGR of 8.0% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Touchless Access Control market research.

The security industry originated in the United States, mainly including video surveillance, access control and management, intrusion alarm, building intercom and other segments. According to our research, the global market size of the security industry is about \$254.1 billion. It is mainly used in the commercial sector, with infrastructure applications accounting for about 37% of the global market. Smart homes also account for a portion of the share and over the past few years, security and control systems have become one of the most popular smart home devices.
