Abstracts

This report studies the global Transformer Monitoring System market status and forecast, categorizes the global Transformer Monitoring System market size (value & volume) by key players, type, application, and region. This report focuses on the top players in North America, Europe, China, Japan, Southeast Asia India and Other regions (Middle East & Africa, Central & South America).

A transformer is an electrical equipment that helps in varying the voltage of the electric current. This stepping up and stepping down of the voltage is especially important when a safe amount of electric current is required to be supplied to the end users. In order to ensure continuous and safe transmission of electricity from the power generation plant to the end users, the transformers utilized for this purpose have to be monitored continuously in real time. This is achieved by installing a transformer monitoring system within a transformer housing. Requirement of a transformer monitoring system is especially important when faults and anomalies within the grid or circuit have to be detected before the complete breakdown of the transformer occurs. These transformer monitoring systems are especially prevalent in areas where the supply of electric power is erratic and power outages are common, thereby signifying a healthy demand for the system in the third world countries.

As international economic situation is complicated, in the next few years there will be many uncertainties. Due to the government' policy and the high sales of Transformer Monitoring System in the international market, the current demand for Transformer Monitoring System product is relatively stable in the mature market, such as North America and Europe, but the demand in Asia-Pacific is relatively higher due to the downstream demand.

Although sales of Transformer Monitoring System brought a lot of opportunities, the study group recommends the new entrants who just having money but without technical advantage and downstream support, do not to enter into the Transformer Monitoring

System field hastily.

The global Transformer Monitoring System market is valued at 1580 million US\$ in 2017 and will reach 2550 million US\$ by the end of 2025, growing at a CAGR of 6.1% during 2018-2025.
