Abstracts

A compactor is a machine or mechanism used to reduce the size of material such as waste material or bio mass through compaction. A trash compactor is often used by a home or business to reduce the volume of trash. Trash compactors are quite similar to industrial balers, but they are usually used to process non-recyclable materials. The garbage is loaded into the input chamber and subjected to tremendous pressure by a hydraulic or pneumatic press. Once it's processed, the volume of the waste is greatly reduced, which makes it easier to handle and cheaper to transport, since fewer hauling rounds are required.

First, for industry structure analysis, the Trash Compactors industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top ten producers account for about 36% of the revenue market. Regionally, USA is the biggest production area of Trash Compactors, also the leader in the whole Trash Compactors industry.

Second, the production of trash compactors increases from 7569 Units in 2011 to 9728 Units in 2016, with an average growth rate of more than 4.75%.

Third, USA occupied 35.40% of the production market in 2015. It is followed by Germany and UK, which respectively have around 13.53% and 8.75% of the global total industry. Other countries have a small amount of production. Geographically, USA was the largest consumption market in the world, which took about 32.28% of the global consumption volume in 2015.

Fourth, for price trend analysis, a key variable in the performance of Trash Compactors producers is raw material costs, specifically the speed at which any increase can be passed through to customers. The price of the major raw material varies according to the steel price. This year, as the downturn of global steel industry, the Trash Compactors price would keep decreasing for at least the following 5 years.

Fifth, for forecast, the global Trash Compactors revenue would keep increasing with

annual growth rate with 3~5%. We tend to believe that this industry still has a bright future, considering the current demand of Trash Compactors. As for product prices, the slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Trash Compactors 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Trash Compactors 4900 industry.

Based on our recent survey, we have several different scenarios about the Trash Compactors 4900 YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ 352.9 million in 2019.
