Abstracts

Triethylaluminium (TEAL) is an organoaluminium compound with colorless and transparent liquid, which formula is $Al_2(C_2H_5)_6$. It can be soluble in hydrocarbon solvents such as hexane, heptane, or toluene and ignite immediately upon exposure to air. At room temperature, it needs to be saved in the inert gas.

Triethylaluminium (TEAL) is an organoaluminium compound with colorless and transparent liquid, which is often used in polyolefin catalyst, organic synthesis and military. With the development of economy, triethylaluminum has huge market potential in the future.

Ethylene, hydrogen, aluminum powder are the main raw materials for the production of triethylaluminum. With the development of triethylaluminum, raw materials' manufacturers are also benefited from the triethylaluminum industry in some extent. The manufacturers are concentrated in USA, Europe and China. Sasol O&S is the largest manufacturer in the global, whose production has reached 7010MT in 2014. The triethylaluminum industry develops fast in China, the average speed reaches 14.75% during 2010 to 2014. Europe and USA are the main consumers in 2014.

All manufactures in the world are committed to the improvement of product. In recent two years, some Chinese manufactures can almost catch up with the world's leading technology.

This industry is affected by the economy and policy, so it's important to put an eye to economic indexes and leaders' prefer.

The global triethylaluminum production will increase to 35766 MT in 2015, from 19789 MT in 2010, it is estimated that the global triethylaluminum demand will develop with an average growth rate of about 16.15% in the coming five years.

We tend to believe this industry now is close to mature, and the consumption increasing degree will show a slow decline curve. On product prices, the slow downward trend in recent years will maintain in the future, as competition intensifies. Besides, prices gap

between different brands will go narrowing gradually. Also, there will be fluctuation in gross margin.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Triethylaluminum 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Triethylaluminum 3900 industry.

Based on our recent survey, we have several different scenarios about the Triethylaluminum 3900 YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ 225.1 million in 2019. The market size of Triethylaluminum 3900 will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
