Abstracts

Trimethoxypropylsilane(CAS 1067-25-0) is a colorless transparent liquid with the molecular formula of C₆H₁₆O₃Si. It finds its application as an important material in sol-gel production, provides a hydrophobic surface treatment for inorganic powders or filter materials and it is one of the catalyst component for polyolefin production.

According to QYResearch's new survey, global Trimethoxypropylsilane market is projected to reach US\$ 51 million in 2029, increasing from US\$ 36 million in 2022, with the CAGR of 5.1% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Trimethoxypropylsilane market research.

Trimethoxypropylsilane is a widely used organosilicon compound in the chemical industry, featuring three methoxy groups and one propylsilane group. Primarily employed as an additive in silicone rubber, siloxane coatings, and construction materials, it offers excellent weather resistance, adhesion, and chemical corrosion resistance to these materials. Currently, with ongoing innovations and expanded applications of silicone-based products across various industries, Trimethoxypropylsilane plays a vital role as an organic silicon crosslinking agent, experiencing a steady growth in market demand.
