Abstracts

Tryptophan (symbol Trp or W) is an α -amino acid that is used in the biosynthesis of proteins. Tryptophan contains an α -amino group, an α -carboxylic acid group, and a side chain indole, making it a non-polar aromatic amino acid. It is essential in humans, meaning the body cannot synthesize it; it must be obtained from the diet. Tryptophan is also a precursor to the neurotransmitter serotonin, the hormone melatonin and vitamin B3. It is encoded by the codon UGG.

Only the L-stereoisomer tryptophan has the function of constructing or enzymatically active proteins, and the R-stereoisomer is occasionally found in naturally occurring peptides.

The industry's leading manufacturers are CJ, Henan Julong and Ajinomoto, with revenues of 36.32%, 20.28% and 25.71% in 2019.
