Abstracts

The turbine impeller is the component of the turbocharger that is subjected to most stress. Here, too, temperatures reach up to 1,050°C, and the purely mechanical forces place the component under extreme stress. These turbine wheels are generally melted from high-strength nickel base alloys. The entire process, from melting to casting, takes place in a vacuum.

According to QYResearch's new survey, global Turbocharger Impeller market is projected to reach US\$ million in 2029, increasing from US\$ million in 2022, with the CAGR of % during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Turbocharger Impeller market research.

Turbocharger is a type of forced induction system. Turbocharger uses the exhaust flow from the engine to spin a turbine, which in turn spins an air pump, compressing the air flowing into the engine. Turbocharger lets the engine squeeze more air into a cylinder and more air means more fuel can be added. So the engine can produce more power without increasing the engine emissions. According to our research, global Turbochargers market is about US\$ 19160 million in 2022. Demand from Automotive and Engineering Machinery are the major drivers for the industry. Major players of the turbochargers market include Borgwarner Inc., Honeywell International Inc., Mitsubishi Heavy Industries Ltd, IHI Corporation, Continental AG, and Cummins Inc.
