Abstracts

Ultrasonic welding is the joining or reforming of thermoplastics or other materials through the use of heat generated from high-frequency mechanical motion. It is accomplished by converting high-frequency electrical energy into high-frequency mechanical motion. That mechanical motion, along with applied force, creates frictional heat at the plastic or other materials components' mating surfaces (joint area) so the material will melt and form a molecular bond between the parts.

Ultrasonic welder is the equipment used in the Ultrasonic plastic welding process widely.

First, for industry structure analysis, the Ultrasonic Welder industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top ten producers account for about 37.39% of the revenue market. Regionally, EU is the biggest production area of Ultrasonic Welder, also the leader in the whole valves industry.

Second, the production of ultrasonic welder increases from 64533 Units in 2011 to 79185 Units in 2016, with an average growth rate of 3.78%.

Third, China occupied 27.76% of the production market in 2015. It is followed by US and EU, which respectively have around 21.17% and 24.05% of the global total industry. Other countries have a small amount of production. Geographically, EU was the largest consumption market in the world, which took about 26.05% of the global consumption volume in 2015. China shared 24.73% of global total.

Fourth, for price trend analysis, a key variable in the performance of Ultrasonic Welder producers is raw material costs, specifically the speed at which any increase can be passed through to customers.

Fifth, for forecast, the global Ultrasonic Welder revenue would keep increasing with annual growth rate with 2~4%. We tend to believe that this industry still has a bright future, considering the current demand of Ultrasonic Welder. As for product prices, the

slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Ultrasonic Welder 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Ultrasonic Welder 4900 industry.

Based on our recent survey, we have several different scenarios about the Ultrasonic Welder 4900 YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ 842.7 million in 2019. The market size of Ultrasonic Welder 4900 will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
