## Abstracts

Urea, also known as carbamide, is an organic compound with chemical formula  $\text{CO}(\text{NH}_2)_2$ . This amide has two  $-\text{NH}_2$  groups joined by a carbonyl ( $\text{C}=\text{O}$ ) functional group.

Urea serves an important role in the metabolism of nitrogen-containing compounds by animals and is the main nitrogen-containing substance in the urine of mammals. It is a colorless, odorless solid, highly soluble in water, and practically non-toxic (LD50 is 15 g/kg for rats). Dissolved in water, it is neither acidic nor alkaline. The body uses it in many processes, most notably nitrogen excretion. The liver forms it by combining two ammonia molecules ( $\text{NH}_3$ ) with a carbon dioxide ( $\text{CO}_2$ ) molecule in the urea cycle. Urea is widely used in fertilizers as a source of nitrogen and is an important raw material for the chemical industry.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Urea 3900 market in 2020.
