Abstracts

Veterinary biologics are vaccines, antigens, antitoxins and other preparations made from living organisms (or genetically engineered) and intended for use in diagnosing, treating, or immunizing animals. Unlike some pharmaceutical products, such as antibiotics, most biologics leave no residues in animals.

According to QYResearch's new survey, global Veterinary Biologics market is projected to reach US\$ 17220 million in 2029, increasing from US\$ 10810 million in 2022, with the CAGR of 6.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Veterinary Biologics market research.

The Animal Healthcare market is primarily driven by the increasing awareness about animal health and well-being, coupled with the rising prevalence of various animal diseases. Pet ownership has grown, leading to higher demand for veterinary services and products. Additionally, the growth of the livestock industry to meet global food demand further boosts the need for animal healthcare products. Advances in veterinary medicine and technology are also driving market growth, enabling better diagnosis, treatment, and preventive care for animals. However, challenges include regulatory complexities and the high cost of certain treatments, which can hinder accessibility for some pet owners or farmers. Striking a balance between quality care and affordability is crucial for the sustainable growth of the animal healthcare market.
