An adjuvant is a substance that is formulated as part of a vaccine to enhance its ability to induce protection against infection. Adjuvants are substances added to vaccines to enhance the immunogenicity of highly purified antigens that have insufficient immunostimulatory capabilities. And many vaccines also contain an adjuvant or adjuvant combination: these are substances added to vaccines specifically because of their immune enhancing effects. Adjuvants were initially used to counter the poor immunogenic potential of highly purified antigens. In recent years their role has expanded as our understanding of the immunology of vaccination has grown.

The classification of Veterinary Vaccine Adjuvants includes Oral, Subcutaneous, Intramuscular and Others. And the proportion of Intramuscular in 2017 is about 41.5%. The Subcutaneous in 2016 is about 23.4%.
