This report studies the global Virus Filtration market status and forecast, categorizes the global Virus Filtration market size (value & volume) by key players, type, application, and region.

This report focuses on the top players in North America, Europe, China, Japan, Southeast Asia India and Other regions (Middle East & Africa, Central & South America).

Virus filtration (VF) is a key step in an overall viral clearance process since it has been demonstrated to effectively clear a wide range of mammalian viruses with a log reduction value (LRV) > 4. The potential to achieve higher LRV from virus retentive filters has historically been examined using bacteriophage surrogates, which commonly demonstrated a potential of > 9 LRV when using high titer spikes (e.g. 10(10) PFU/mL). However, as the filter loading increases, one typically experiences significant decreases in performance and LRV.

The global average price of Virus Filtration is in the decreasing trend, from 78.59 USD/Unit in 2011 to 75.88 USD/Unit in 2015. With the situation of global economy, prices will be in decreasing trend in the following five years.

The classification of Virus Filtration includes Kits and Reagents, Filtration Systems, and other service. The proportion of Kits and Reagents in 2015 is about 40%, and the proportion of Filtration Systems is about 30%.

The global Virus Filtration market is valued at 3570 million US\$ in 2017 and will reach 9340 million US\$ by the end of 2025, growing at a CAGR of 12.8% during 2018-2025. The major players covered in this report
