Vitrified clay pipe (VCP) is a pipe variant made from clay that has been subjected to a vitrification process. This process involves exposing the dried clay pipe to extremely high temperatures, which causes it to become exceptionally hard and almost totally inert. These clay pipes are commonly used in sewer systems because of their outstanding working qualities.

For price trend analysis, a key variable in the performance of Vitrified Clay Pipes producers is raw material costs, specifically the speed at which any increase can be passed through to customers.

For forecast, the global Vitrified Clay Pipes revenue would keep increasing with annual growth rate with 5~7%. We tend to believe that this industry still has a good future, considering the current demand of Vitrified Clay Pipes.

The global Vitrified Clay Pipes market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
