Voice Coil Motor (VCM) is an electronic component that adjusts focus by moving multiple lens holders according to the change in current via magnets and a coil built into the component.

OIS (Optical Image Stabilizer) is another function of VCM, and the OIS (Optical Image Stabilizer) detects the hand shaking and moves in the opposite direction of the shaking part of the lens to prevent the image from becoming blurred.

At present, in the foreign developed countries the VCM industry is on a higher level than other countries, the world's large enterprises are mainly concentrated in Japan and Korea. Meanwhile, many foreign companies set up factories in China.
