This report studies the global Wafer Grinder market status and forecast, categorizes the global Wafer Grinder market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Wafer Grinder is used to process silicon and compound semiconductor wafers to ultra-thin levels and polishing machines to remove the grinding damage layer from the wafer back-side and to increase chip strength. The main application of wafer Edge Grinder and Wafer Surface Grinder are Semiconductor and Photovoltaic field.

One of the major challenges faced by the global semiconductor wafer grinding equipment market is the high development costs associated with the manufacturing of semiconductor equipment. Semiconductor wafer polishing and grinding equipment requires polishers, grinders, and rotating platens, which are expensive to procure. Also, since there are only a few suppliers of those components, vendors need to invest heavily in acquiring these products. The increasing costs of polishing and grinding consumables, such as slurries and pads, add to the overall cost. Each equipment costs around a million dollars, making the initial investment for various foundries considerably high. Such equipment will also have a high repair and maintenance cost, which further adds to the overall cost.

The global Wafer Grinder market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
