Abstracts

A water chiller is a mechanical device used to facilitate heat exchange from water to a refrigerant in a closed loop system. Chillers have widespread industrial applications. They are also in huge demand in the Beverages, Plastics, and Medical industries. Chillers are available in different sizes and cooling capacities and have a range of energy consumption levels to meet the requirements of end-users.

US sales of water chiller was about 77627 units in 2015, and will reach to 81250 units in 2016. From 2011 to 2015, the annual growth rate was about 5.56%.

The major brands include Trane (Ingersoll-Rand), Carrier, Parker Hannifin , Lennox, Dimplex , Thermal Solutions, EcoChillers., Thermal Care, SMC and Dinkin (McQuay), these companies occupied above 60% market share. And the top five players occupied about 50% market share.

Plastics & Rubber and Food Processing are the largest consumption field, occupied above 45% market share. Centrifugal chillers and reciprocating chillers are major product type, and have about 63 market share.

In the future, the growth rate will be about 5.52%, and the production will reach to 106267 units in 2021. Finally, although sales of water chiller products bring a lot of opportunities, the study group recommends the new entrants who just have money but without technical advantage, raw materials advantage and downstream support, do not enter into the Water chiller field hastily.
