## Abstracts

Water Hardness Removal is the device to remove of calcium, magnesium, and certain other metal cations in hard water.

First, for industry structure analysis, the Water Hardness Removal industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 43% of the revenue market. Regionally, North America is the biggest production area of valves, also the leader in the whole industry.

Second, the production of high voltage direct current cable increases from 1926.3 K Units in 2011 to 3043.7 K Units in 2016, with an average growth rate of 9.67%.

Third, North America occupied 24.79% of the production market in 2015. It is followed by Europe and China, which respectively have around 21.22% and 22.09% of the global total industry. Other countries have a small amount of production. Geographically, North America was the largest consumption market in the world, which took about 24.67% of the global consumption volume in 2015. Europe shared 21.40% of global total.

Fourth, for price trend analysis, a key variable in the performance of Water Hardness Removal producers is raw material costs, specifically the speed at which any increase can be passed through to customers.

Fifth, for forecast, the global Water Hardness Removal revenue would keep increasing with annual growth rate with 8-10%. We tend to believe that this industry still has a bright future, considering the current demand of Water Hardness Removal. As for product prices, the slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Water

Hardness Removal 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Water Hardness Removal 4900 industry.
