Abstracts

A water meter is a device that is used to measure the volume of water used by residential and commercial building that are supplied with water by a public water supply system. They can also be used at a well, water source or water system to determine the flow of water via a specific portion of the system.. Some water meters measure water in gallons while others measure in cubic feet.

According to study, there are two types of Water Meter, including Smart Water Meter and Mechanical Water Meter. The Mechanical Water Meter segment is projected to account for the largest volume share during the forecast period, however, with the acceleration of China's urbanization process and strengthened the comprehensive utilization of water resources by government, the smart water meter has entered a period of rapid replacement of mechanical water meters. In recent years, the production of smart water meters has been growing at a rate of around 15%, which will greatly meet market demand.
