Water-resisting Admixtures are mixed into concrete to increase its resistance to water penetration, reducing the risk of moisture-related damage.

According to QYResearch's new survey, global Water-resisting Admixtures for Concrete market is projected to reach US\$ 343.5 million in 2029, increasing from US\$ 242 million in 2022, with the CAGR of 5.2% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Water-resisting Admixtures for Concrete market research.

According to the Japan Cement Association, Japan's cement industry emitted about 40 million tons of carbon dioxide in 2020. And the cement industry became the fourth largest source of carbon dioxide emissions in the industrial sector after electricity, steel and chemicals. 60% of the cement industry's carbon emissions come from process emissions, 35% from combustion emissions and 5% from indirect emissions from electricity. According to our "Building Materials Research Institute", the global clinker capacity in 2022 was about 3.55 billion tons, and the global cement production was about 4.0 billion tons. According to the National Bureau of Statistics, China's cumulative cement output reached 2.118 billion tons in 2022.
