Abstracts

Sodium dichloroisocyanurate (NaDCC or SDIC) is a chemical compound widely used as a cleansing agent and disinfectant. It is a colorless, water-soluble solid, produced as a result of reaction of cyanuric acid with chlorine. It is mainly used as a disinfectant, biocide and industrial deodorant. It is found in some modern water purification tablets/filters. It is more efficient than the formerly used halazone water disinfectant. In these applications, it is a slow-release source of chlorine in low concentrations at a relatively constant rate. As a disinfectant, it is used to sterilize drinking water, swimming pools, tableware and air, and to fight against infectious diseases as a routine disinfection agent.

According to QYResearch's new survey, global Water Treatment Sodium Dichloroisocyanurate market is projected to reach US\$ 745 million in 2029, increasing from US\$ 435.4 million in 2022, with the CAGR of 7.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Water Treatment Sodium Dichloroisocyanurate market research.

A new publication on trends in the water market has estimated that the global water treatment market is projected to grow at a compound annual growth rate of some 7% per year in the period 2023-2028. In 2022, the water treatment market was valued at US \$ 303 billion, and it is projected to grow to US \$ 460 billion by 2028. This growth is driven amongst others by the continuing trend of urbanisation: currently, 57% of the world population lives in urban areas, and the average annual growth rate of urban populations is 4.4% due mostly to the fact that some 80% of the world's GDP is produced in urban areas. Beyond this, however, total global water demand is expected

to grow by between 20-30% by 2050, increasing pressure on available resources and placing a premium on the value of treated wastewater. Increasing freshwater scarcity in some regions, the rapid growth in emerging markets, rising concerns around environmental degradation, increasing by companies in advanced wastewater treatment technology and growing emphasis on water quality and public health, are all factors contributing to the rise in demand for water treatment services. Governments are introducing increasingly stringent laws and regulations related to both water quality and pollution, and are developing medium and long term policies requiring the expansion of water treatment facilities.
