## Abstracts

This report studies the global Welding Robot market status and forecast, categorizes the global Welding Robot market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Welding robot is a kind of industrial robot used in welding processes, where two materials are fused together through heating, intermixing, and then cooling the materials to form a strong join. Welding robot is automated and it can help increasing efficiencies & consistencies. Welding robot is widely used in automotive industry, equipment, machinery industry, and ship industry, etc.

In the last five years, welding robot industry has got a rapid development. The production of welding robot is increasing faster every day. During this time, China has been the largest market of welding robot, superseded Japan.

In another hand, the low robot density in China indicated the huge potential market of welding robot. Now, some companies like KUKA, ABB, Panasonic and Yaskawa have built plants in China to produce welding robots. They are trying to grab the market before the domestic manufacturers getting into an investment.

In China, the biggest manufacturing is Siasun in Shenyang, but their production is relatively little compared with these foreign producers. So welding robots consumers in China have to import products from foreign manufacturers.

The global Welding Robot market is valued at 7080 million US\$ in 2017 and will reach 13100 million US\$ by the end of 2025, growing at a CAGR of 9.2% during 2018-2025.
