Abstracts

Paste wax is a product that has been used for centuries to help apply a smooth, gentle finish to woodworking projects. It offers a beautiful shine and coating. Paste wax is a thick, creamy wax that is often applied with a cheesecloth or rag, buffing into the grains of the wood until a highly vibrant shine and gloss forms.

According to QYResearch's new survey, global Wood Paste Waxes market is projected to reach US\$ 24 million in 2029, increasing from US\$ 19 million in 2022, with the CAGR of 3.7% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Wood Paste Waxes market research.

Consumer goods are products which are intended for everyday private consumption. They cover a large product portfolio including food and non-food categories. They can be further classified into fast moving consumer goods (FMCG) and slow moving consumer goods (SMCG). The definitions are based on how frequently products are sold to the customer, a determining factor in the rotation of goods. FMCG products have a useful life shorter than a year and are, therefore, products bought relatively frequently with recurring expenditure. This includes categories such as food and beverages, personal care, cleaning products, apparel and footwear, tobacco and pet food/pet care. SMCG products have a useful life longer than a year, comprising items such as household appliances, furniture and home improvement products. These items have a lower sales frequency and are not rotating as rapidly as FMCG.
