Abstracts

A sander is a power tool used to smooth surfaces by abrasion with sandpaper. Sanders have a means to attach the sandpaper and a mechanism to move it rapidly contained within a housing with means to hand-hold it or fix it to a workbench. Woodworking sanders are usually powered electrically, and those used in auto-body repair work by compressed air. There are many different types of sanders for different purposes. Multi-purpose power tools and electric drills may have sander attachments.

According to QYResearch's new survey, global Woodworking Sander market is projected to reach US\$ 1350.6 million in 2029, increasing from US\$ 912 million in 2022, with the CAGR of 5.8% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Woodworking Sander market research.

China has become a major global producer of wood processing, and its output of bamboo products, wood-based panels, furniture and flooring ranks among the top in the world. China's future demand for wood and its products will increase rapidly with the development of the economy. 21st century, the first 30 years, the global economic development of the hotspot is mainly in East Asia, especially in mainland China, Hong Kong, Macao and Taiwan, the region of the demand for forest products will be the fastest growing. In addition the country introduced policies to stimulate domestic demand and the gradual rebound of the real estate market will promote the wood processing industry to maintain stable growth. Stable growth of the wood processing industry will drive the stable development of China's electric woodworking tools market. Based on our research, electric woodworking tools is the second largest market for power tools in China, and in recent years, sales of electric woodworking tools in China
