## Abstracts

This report studies the global X-ray Fluorescence Spectrometer market status and forecast, categorizes the global X-ray Fluorescence Spectrometer market size (value & volume) by key players, type, application, and region.

This report focuses on the top players in North America, Europe, China, Japan, Southeast Asia India and Other regions (Middle East & Africa, Central & South America).

X-ray fluorescence spectrometer is an x-ray instrument used for routine, relatively non-destructive chemical analyses of rocks, minerals, sediments and fluids. It works on wavelength-dispersive spectroscopic principles that are similar to an electron microprobe (EPMA). However, an XRF cannot generally make analyses at the small spot sizes typical of EPMA work (2-5 microns), so it is typically used for bulk analyses of larger fractions of geological materials. The relative ease and low cost of sample preparation, and the stability and ease of use of x-ray spectrometers make this one of the most widely used methods for analysis of major and trace elements in rocks, minerals, and sediment.

In consumption market, the Europe consumption value of X-ray fluorescence spectrometers increases with the 1.93% average growth rate. Germany, Netherlands and United Kingdom are the mainly consumption regions due to the bigger demand of downstream applications. In 2015, these two regions occupied 44.65% of the Europe consumption volume in total.

We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents decreasing trend according to the economy development status and international competition. Also, it will be decreasing trend in gross margin.

The global X-ray Fluorescence Spectrometer market is valued at xx million US\$ in 2017

and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
