Abstracts

X-ray FPD is used in radiography for conversion of X-rays to light (indirect conversion) or charge (direct conversion) which is read out using thin film transistors (TFT array).

According to QYResearch's new survey, global X-ray FPD market is projected to reach US\$ 409.6 million in 2029, increasing from US\$ 329 million in 2022, with the CAGR of 3.0% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole X-ray FPD market research.

In the coming years there is an increasing demand for Flat Panel X-Ray Detectors in the regions of North America that is expected to drive the market for more advanced Flat Panel X-Ray Detectors. Increasing of medical fields expenditures, more-intense competition, launches in introducing new products, retrofitting and renovation of old technology, increasing adoption of Flat Panel X-Ray Detectors will drive growth in North America markets. The market for Flat Panel X-Ray Detectors is also very competitive, and top companies also faces intense competition from over a dozen smaller competitors. As a result of these competitive dynamics, in order to effectively retain the business of customers and compete with competitors, it must have an advantage in one or more significant areas, such as lower product cost, better product quality and/or superior technology and/or performance.
