Abstracts

Zirconia oxygen sensors are comprised of a zirconium-dioxide-based solid electrolyte. Zirconia oxygen sensors have unique characteristics, such as fast operational readiness, temperature resistance, not sensitive to hydraulic shock, etc. It is used extensively to monitor the air-to-fuel ratio of internal combustion engines.

Chinese zirconia oxygen sensors industry has developed into a national industry with certain research and production capacity, industry product mix has gradually improved, currently China has become international zirconia oxygen sensors large manufacture country. In 2015, the production of zirconia oxygen sensors in China achieved 67991 K Pcs, which account for about 22.68% market share. In addition, the import tax rate of auto parts is 10%, which is much lower than that of the 25% for the entire vehicle in China. This policy promotes the import of auto parts instead of import the entire vehicle. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
