Abstracts

Breast Cancer Screening Market is projected to reach US\$ 21 Billion by the end of year 2024. In both the developed and developing countries, Breast Cancer is the top cancer among women. The incidence of breast cancer is rising in the lower income countries due to increase in life expectancy, adaption of western lifestyles and increasing urbanization. Globally, more than half of the breast cancer cases now have been reported from low and middle income countries (LMICs) as these countries do not have proper breast screening programmes, hence, the majority of cases diagnosed in late stages.

To reverse the trend of increasing breast cancer incidences & mortality in the low and middle income countries, these countries need to develop an effective strategy which not only will carry a broad breast cancer screening programs but will also address the growing incidence of breast cancer and disease-related deaths. Such strategy may include public and medical community awareness, and partnerships between community advocates, governments, non-governmental organizations & biotechnology.
