Abstracts

Cancer is the second-leading cause of death and disability in the world, behind only heart disease. More people die from cancer every year around the world than AIDS, Tuberculosis and Malaria combined. Cancer testing has tremendous growth opportunities for the next five years. According to the National Cancer Institute (NCI), 85% of cancer patients are treated in community-based, private practice oncology settings. Accordingly, global expansion of cancer marker technologies may be fueled by an increased marketing of new diagnostic tests to physicians. During the next five years, the worldwide cancer diagnostics market is promising to be an exciting, dynamic and rapidly expanding field. The anticipated technological breakthroughs will create numerous opportunities for determining genetic predisposition, detecting specific tumors, and monitoring biological response to cancer therapy. The global cancer test market is expected to be more than US\$ 14 Billion by 2018.

Renub Research study titled “Cancer Test Market & Forecast, Companies Cancer Test Platform, Pipeline Analysis and Clinical Trials - Global” provides a comprehensive assessment of the fast-evolving, high-growth of Cancer Test market segment.
