# **Abstracts**

Electric Bus Market is expected to surpass USD 400 Billion by the year 2024. China is gaining high prominence in developing electric bus over rest of the world. The e-bus is comparatively new discovery than electric car and electric bike but, now every country is talking about battery powered bus with great interest. The governments of many countries understand that electric bus will transform the city transport, where many cities across the world are facing severe air pollution. According to Renub Research, e-bus has great potential to change and reshape the whole transportation industry.

The major growth driver of electric bus market is pro government support. Climate change is one of the big concerns across the world and government of many countries set their national target to mitigate the carbon emission to control the air pollution. Electric bus will transform the city transport and shift from conventional energy to environmental friendly energy.

In this report we have done in-depth analysis of pilot project, demonstration project, technology testing, and operational efficiency testing project of different electric bus models developed by major manufacturer across the world. We have covered almost 90 cities of Europe and Nordics to provide clear picture of current electric bus adoption by government and independent agencies.

Renub Research study titled "Electric Bus Market, Volume Global Analysis by Types (Battery Electric e-bus & Plug-in Hybrid e-bus) Regions (China, Europe, Nordics, United States, India) Company (Yutong, BYD, Proterra Inc.)" provides a comprehensive
