Abstracts

Epilepsy is a chronic disease in which patient's brain activities become abnormal due to seizures. Seizure is an unexpected rush of electrical activity in the brain. Seizure is categorized by two types - generalized seizures and focal or partial seizures. Generalized seizures affect the whole brain whereas focal or partial seizures affect just one part of the brain. Global epilepsy drugs market is expected to cross US\$ 9 Billion landmark by 2025.

Epilepsy can develop in both males and females of all races, ethnic backgrounds and ages. It affects around 65 Million people globally. United States has around 3.4 Million epilepsy patients; among them around 470 Thousands are children. Epilepsy prevalence varies across various parts of the world. At present, nearly one-third of the total patients are suffering from uncontrollable seizures and are not able to get treatment because no available treatment works for them.

The factors that are driving the global Epilepsy drug market are increasing epilepsy prevalence, growing patient awareness programs, government funding and drugs reimbursement options in European & American countries. Recently, anti-epilepsy drugs Epidiolex approvals for pediatric epilepsies, namely Lennox-Gastaut syndrome and Dravet syndrome in United States will also help in the growth of Epilepsy drug market during the forecast period as well.
