Abstracts

Europe CGM Market is expected to surpass US\$ 800 Million by the end of year 2024. Good healthcare infrastructure, rising healthcare expenditure and awareness of patients regarding CGM technology in Europe will further accelerate the market of Continuous Glucose Monitoring (CGM) device. Continuous Glucose Monitoring (CGM) device are comparatively new innovation in diabetes management. The conventional technique that permit users for one time check of glucose levels, but the CGM systems manage, monitor and inform the user if the glucose level nears current levels. The CGM system measures glucose from the tissues as compared to manual testing of blood by a finger-stick glucose meter assists in identifying glucose levels for a longer span of time.

Generally people who suffer from diabetes develop poor habits over the years which gradually seem hard to break. Using CGM systems that assist to control the desired glucose level by well awareness and understanding of food intake and blood glucose trends after eating specific foods.

Germany & France CGM Market will remain a dominant force in European Region

According to this market research report Germany & France is expected to be a dominant force in Europe Continuous Glucose Monitoring (CGM) market. The adoption of CGM device is comparatively faster in Sweden compared to other European region. As per many diabetes experts, CGM is the compatible device for effective diabetes management for people having severe complications (hypoglycemia or hyperglycemia) in day to day life.

European Countries Reimbursement Policies on CGM Device

This report provides complete assessment of CGM reimbursement for specific countries that includes: United Kingdom, Germany, France, Sweden, Switzerland and Netherlands. Many countries provide CGM reimbursement to pediatric, gestational diabetes and type 1 diabetes patients only. It is anticipated that continuous glucose monitoring systems will be widely accessible to all diabetes patients whether it type 1 or type 2.
