Abstracts

Sugarcane is a cash crop mostly grown in tropical countries and has a notable quality of serving as both Food and fuel sectors. Sugar is a sweet crystalline substance obtained from sugar cane as well from sugar beet. Around the globe, it used in various food and non-food applications. In contrast, as per International Institute for Sustainable Development, the cultivation and processing of Sugar cane currently provide livelihoods for 100 million people globally. And at the country, Brazil's sugarcane industry employs over 1 million people of workforce approx 25% from rural areas. As per Renub Research Analysis Global Sugar Market will be US\$ 53 Billion by 2027.

Sugar plays an important role and functions into the food industry; for instance, it offers a sweet taste and is used as preservatives and prevention from microorganism development. Besides, it is also used for retaining moisture and preventing staleness in baked goods.

Moreover, the driving forces towards this market growth are sugar consumption in food and pharmaceutical industry. Its uses in the food and beverages sector are gaining traction during the forecast period. Besides, its usages in the preparation of antibiotics and cough syrups in the pharmaceuticals sectors are expected to greatly impact this market.

It is being seen that the intake of sugar supply growth has outpaced demand for human consumption during 2016 and 2017. It is estimated that it will grow during the forecast period as the expansion of the planted area in Asian pacific regions like China and Indonesia and improved farm productivity.

However, this industry is also facing some challenges such as demand is expected to stagnate in developed nations due to dietary changes, health consciousness related to sugar consumption such as obesity and diabetes as well as government intervention to reduce sugar intake.
