## Abstracts

Currently, Hip replacement is done via minimally invasive surgery or procedure instead of a conventional procedure. Rising adoption of minimally invasive procedure across the world will further boost the Hip replacement market. In Hip replacement surgery, hip joint replaces with a prosthetic hip joint which is made up of either plastic or metal. It is done at the final stage if other treatment procedure failed to relieve pain. According to Renub Research Global Hip Replacement Market is expected to reach nearly 7 Billion by the end of the year 2025.

The primary reason that is fueling the growth of Hip Replacement Market is rising prevalence of ageing population, growing prevalence of osteoarthritis disease, growing per capita health expenditure, increasing overall patient population, hip related product is getting faster approval, government initiatives and increase in overall government healthcare expenditure etc. Additionally, rising injuries, trauma cases and advancement in the minimally invasive procedure, it will further propel the market of Hip replacement.

### Rising Geriatric Population Boosting Demand of Hip Replacement Market

According to the United Nation, the geriatric population is rising dramatically, in 2017; the population over 60 years of age was 960 Million. It is anticipated that the global elder population will surge to 1.4 Billion by the end of the year 2030. Along with the rising ageing population, many developed, as well as developing countries, focuses on ageing healthcare. According to our analysis, the ageing population is highly prone to Hip and joint abnormalities. Therefore, in the coming future ageing population will drive the Hip replacement market to a great extent.
