Abstracts

Anesthesia is a medicine which is given to relieve pain and sensation during surgery. Drugs render a patient unresponsive and unconscious. United States Anesthesia Drugs Market is projected to reach US\$ 5 Billion by the year 2024 owing to the increasing prevalence of cardiovascular cases, rising geriatric population and growing number of urgent surgeries in the United States. The different types of anesthesia are Local Anesthesia, General Inhalation Anesthesia and General Intravenous Anesthesia. Local Anesthesia and General Anesthesia are the two commonly used types of anesthesia. Local anesthesia is a condition when sensation within a specific body part is inhibited, whereas general anesthesia results in loss of consciousness and sensation. Furthermore, the public and private health insurers' consideration of adding anesthetic products in their reimbursement policy is expected to boost the US anesthesia drugs market in the recent years.
