Abstracts

The dry fruits are derived from natural fresh fruits, by removing water content naturally, by sun drying, or by specialized dryers or dehydrators. The main benefits of these fruits are sweet to taste, long shelf life, and nutritional value. The consumption of dry fruits in the United States is widespread. Shifting user preference for nutritious and healthy food choices due to the rise in obesity and the increasing ageing population are driving the market for dried fruit. Besides, augmented acceptance for nutritious packaged food and wide purpose of dried fruit in the snack, bakery, confectionery, and dairy industries has fueled the demand for dried fruit market over the years. The dried fruits market in the United States was US\$ 10.43 Billion in 2020.

The traditional or conventional dry fruits sold in the U.S. market are Almonds, Hazelnuts, Pecans, Pistachios, Walnuts and Macadamias. In October 2019, The California Prune Board, research found that the utilization of dried fruit reduces the risk of developing certain types of cancers and cancers of the prostate, stomach, colon, bladder and pancreas. As per research, American has been including dried fruit in their diets. The Dried Fruit Market of the United States is anticipated to surge at a CAGR of 5.34% during the forecast period 2020 - 2027.

The production of dry fruit in the U.S. is at the San Joaquin Valley, favouring soil and climate, especially the hot and dry summers. The output is increasing steadily in the U.S. as yields rise, as more acres are increasingly planted, and as mechanization increases productivity, all of which enables the U.S. industry to retain a dominant share of the world market. The United States is the largest exporter of Dry Fruit in the world. According to Renub Research, United States Dry Fruit Market will be US\$ 15 Billion by the end of the year 2027.
