Abstracts

Cervical cancer is the fourth most common cancer prevailing in women and the seventh in terms of overall cancer incidences. North America Cervical Cancer Screening Market is projected to reach US\$ 100 Million by the year 2024. Cervical cancer affects the lower part of the uterus (womb). Cervical cancer generally occurs in women over 30 years. It is mostly caused by the Human papillomavirus (HPV) virus.

Increasing cervical cancer prevalence rate is one of the key factors that drive the cervical cancer screening market. Rapidly increasing female population, growing incidence of HPV infections and increasing awareness about cervical cancer screening programs is also expected to drive the cervical cancer screening market in the near future.
