Abstracts

Wound care or wound management offers a portfolio of products that can heal a sophisticated or complex wound like diabetes wound and ulcers. This wound management is based on moisture therapy that can repair or heal the wound site (cells and tissue) in a very natural way. Rising efficacy of wound care products will further boost the global wound care market in the future course of time. However, the rising cost of wound care product will hinder the market growth in the future course of time. The Global Wound care market is anticipated to cross US\$ 25 Billion Mark by the end of the year 2025.

The major factors that are fueling the market growth are; rising ageing population, increasing disposable income, advancement in technologies, increasing awareness of people regarding wound care therapy, increasing prevalence of diabetes and other chronic disease, increasing accident and trauma center etc. Additionally, rising research and development in wound care and the advancement of numerous specific wound care products will further propel the global wound care market in the forecast period.
