Date: March 2011

Pages: 75

Price: US\$ 1,800.00 (Single User License)

ID: C158ABCD36EEN

Abstracts

Ethylene oxide (EO) is an organic chemical material ranking only second to polyethylene (PE) and polyvinyl chloride (PVC) among ethylene industrial derivatives, with extensive applications in the production of ethylene glycol (EG), AEO surfactant, polyether for polycarboxylate water reducer, and ethanol amine. In particular, EG is usually produced with EO. In 2010, EO/EG joint production facilities accounted for 65.3% of the EO equivalent capacity, with the rest going to commodity EO.

The end product of EO/EG joint production facilities is EG. Although the EG self-sufficiency rate in China is relatively low, the import price is very low due to the worldwide EG overcapacity, consequently, the price of home-made EG is slumping, and domestic EG industry can only make meager profits. By contrast, the commodity EO industry enjoys a higher profitability due to a serious supply crunch. China's commodity EO supply-demand gap reached 500,000 tons in 2010, and will continue to widen in the next few years due to little capacity growth during 2010-2013, therefore, the commodity EO industry will still be highly profitable.

Ranked by the equivalent EO capacity, Zhenhai Refining & Chemical Company was No.1 in 2010, accounting for 650,000 tons or 18.2% of the total capacity; the second place went to Shanghai Petrochemical Company Limited, accounting for 14.8% of the total capacity, followed by Yangzi Petrochemical Company Limited, CNOOC and Shell Petrochemicals Company Limited and BASF-YPC Company Limited. When ranked by the capacity of commodity EO, top three companies were Yangzi Petrochemical Company Limited, Shanghai Petrochemical Company Limited and China Sanjiang Fine Chemicals Company Limited. Particularly, China Sanjiang Fine Chemicals Company Limited is not only China's largest privately-owned EO producer, but also the largest AEO surfactant producer.

This report probes into the EO industry and elaborates on the downstream intensive processing fields, including the supply, demand and competition among enterprises in such fields. Take AEO surfactant and polycarboxylate water reducer for example:

1. AEO Surfactant:

AEO surfactant is a nonionic surfactant, mainly used in household and industrial detergents. In 2010, the output of AEO surfactant in China approximated 300,000 tons, and its import volume reached roughly 140,000 tons. In particular, China Sanjiang Fine Chemicals Company Limited and Liaoning Huaxing Group Chemical Corporation, the two largest enterprises in China by AEO capacity, contributed 12.9% and 12.3% of the total output in 2009 respectively, followed by Sasol (China) Chemical, and enterprises subordinate to CNPC and Sinopec. In 2010, the demand for AEO surfactant approximated 439,500 tons in China, with the market scale close to RMB6 billion. And it is expected that the AEO surfactant demand of China will hit 530,000 tons in 2014.

2. Polycarboxylate Water Reducer

Polycarboxylate water reducer is of high and sustained water reducing effect, which is mainly applied for premixed concrete. Polycarboxylate is principally composed of polyether monomer which is prepared through addition reaction of EO. In 2010, China's output of polycarboxylate water reducer approximated 1.5 million tons, up 18% year-on-year. In addition, the demand for polyether monomer resulted from polycarboxylate water reducer production reached 220,000 tons in 2010. Driven by the growing application of premixed concrete and polycarboxylate water reducer as well as the booming high-speed rail industry, both polycarboxylate water reducer and polyether will grow rapidly, at an estimated annual compound growth rate of 25% in 2010-2014.

In China, there are five large enterprises engaged in the production of polyether monomer for polycarboxylate water reducer, namely Liaoning Oxiranchem, Inc., Honam Petrochemical Corp, Liaoning Kelong Fine Chemicals Co., Ltd., Shanghai Taijie Chemical Co., Ltd. and Zhejiang Huangma Chemical Industry Group Co., Ltd. Key polycarboxylate water reducer producers include Jiangsu Bote New Materials Co., Ltd, Fuclear (Suzhou), Zhejiang Wulong Chemical Industrial Stock Co., Ltd. and Xiamen Academy of Building Research Group Co., Ltd., with polycarboxylate capacities of 150,000 tons, 130,000 tons, 100,000 tons and 80,000 tons respectively. As the development of polycarboxylate water reducer hasn't been long in China, these polycarboxylate water reducer enterprises are generally in their early stage of

development, and haven't been able to expand their business beyond their respective provinces.

Contents

1. ETHYLENE OXIDE (EO) OVERVIEW

- 1.1 Profile
- 1.2 Production Technology
- 1.3 Industry Chain

2. EO UPSTREAM

- 2.1 Ethylene Supply
- 2.2 Ethylene Consumption

3. EO MARKET

- 3.1 Global Market
 - 3.1.1 Supply
 - 3.1.2 Demand
- 3.2 Supply in China
 - 3.2.1 Total EO Capacity
 - 3.2.2 Capacity of Commodity EO
- 3.3 Domestic Capacity Distribution by Region
 - 3.3.1 EO
 - 3.3.2 Commodity EO
- 3.4 Competition Pattern in China
 - 3.4.1 EO
 - 3.4.2 Commodity EO
- 3.5 Demand in China
- 3.6 EO Price in China

4. EO DOWNSTREAM DEEP PROCESSING

- 4.1 Ethylene Glycol (EG)
 - 4.1.1 Production
 - 4.1.2 Downstream Demand Slows down
 - 4.1.3 Low Degree of Self-Sufficiency in China
- 4.2 AEO Surfactant
 - 4.2.1 Market Overview
 - 4.2.2 Supply

- 4.2.3 Demand
- 4.3 High-Performance Concrete Water Reducer
 - 4.3.1 Premixed Concrete will Maintain Rapid Development
 - 4.3.2 Application of Polycarboxylate Water Reducer will Increase
 - 4.3.3 Application of Polycarboxylate Water Reducer in High-Speed Rail
 - 4.3.4 Demand for Polycarboxylate Water Reducer will Surge
 - 4.3.5 Production of Related Products
- 4.4 Polyethylene Glycol (PEG) for Polysilicon Cutting Fluid
 - 4.4.1 PV Industry Expects a Bright Future in the Long Run
 - 4.4.2 Crystalline Silicon Cell Still Takes the Lead
 - 4.4.3 Development of Polycrystalline Silicon Slice in China Boosts the Demand for Cutting Fluid
 - 4.4.4 Production of Crystalline Silicon Cutting Fluid
- 4.5 Other Deep Processing products
 - 4.5.1 Ethanolamine (EOA)
 - 4.5.2 Taurine

5. KEY EO MANUFACTURERS

- 5.1 Sinopec Zhenhai Refining & Chemical Company (ZRCC)
 - 5.1.1 Profile
 - 5.1.2 Ethylene/EO Project
- 5.2 Shanghai Petrochemical Company Limited
 - 5.2.1 Profile
 - 5.2.2 Operation of Petrochemical products
- 5.3 Yangzi Petrochemical Company Limited
 - 5.3.1 Profile
 - 5.3.2 Development
- 5.4 CNOOC and Shell Petrochemicals Company Limited (CSPC)
- 5.5 Jilin Petrochemical
 - 5.5.1 Profile
 - 5.5.2 EO Business
- 5.6 BASF-YPC Company Limited
 - 5.6.1 Profile
 - 5.6.2 Development
- 5.7 China North Industries Group Corporation (CNGC)
 - 5.7.1 Liaoning Huajin Chemical Industry Group Co., Ltd. (CNGC Huajin Chemicals)
 - 5.7.2 CNGC China North Chemical Industries (Group) Co., Ltd.
- 5.8 China Sanjiang Fine Chemicals Company Limited

- 5.8.1 Profile
- 5.8.2 Operation
- 5.8.3 Development

6. EO DEEP PROCESSING ENTERPRISES

6.1 Liaoning Huaxing Group Chemical Corporation

- 6.1.1 Profile
- 6.1.2 Operation

6.2 Sasol (China) Chemical Co., Ltd.

- 6.2.1 Profile
- 6.2.2 Operation

6.3 Liaoning Oxiranchem, Inc.

- 6.3.1 Profile
- 6.3.2 Operation
- 6.3.3 Development

6.4 Liaoning Kelong Fine Chemical Co., Ltd.

- 6.4.1 Profile
- 6.4.2 Operation

6.5 Jiangsu Bote New Materials Co., Ltd.

- 6.5.1 Profile
- 6.5.2 Water Reducer Business

6.6 Xiamen Academy of Building Research Group Co., Ltd.

- 6.6.1 Profile
- 6.6.2 Operation
- 6.6.3 Development

6.7 Qianjiang Yongan Pharmaceutical Co., Ltd.

- 6.7.1 Profile
- 6.7.2 Operation
- 6.7.3 Development
